DEVELOPMENTS IN WORLD COTTON TRADE

World cotton trade rose for the third consecutive season by a cumulative 1.6 million tons and reached a record of 7.3 million tons in 2003/04. The record growth in world trade during the past three seasons was caused by increasing cotton mill use in cotton producing countries, with domestic production falling behind increasing consumption in China (Mainland), Pakistan, India and Turkey. World mill use rose by 1.5 million tons during the three seasons. As a result of increased dependency of the four producing countries on trade, world imports as a share of world mill use rose from 29% in 2000/01 to 34% in 2003/04. The largest and most significant impetus to the growth of world trade was provided by a sharp increase of cotton use in China (Mainland) from 5.2 million tons in 2000/01 to an estimated 7.1 million tons in 2003/04. A record surge of cotton imports by China (Mainland) caused world trade to increase by 800,000 tons during 2003/04 alone. China (Mainland), Turkey, India and Pakistan accounted for 15% of world imports in 2000/01 and for an estimated 42% in 2003/04. Imports by the rest of the world declined from 4.9 million tons in 2000/01 to 4.3 million tons in 2003/04. In 2004/05, world cotton trade could decline to 6.6 million tons, despite growing mill use in the four countries, because of increasing domestic production, especially in China (Mainland).

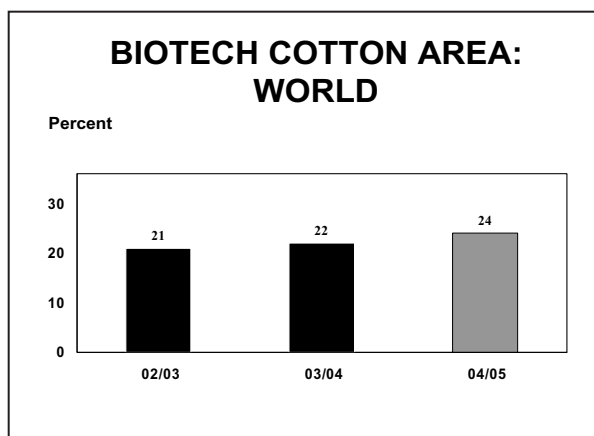

Following a record world crop in 2001/02, world cotton supplies were more than adequate to meet increasing import demand. The largest share of increased world import demand was met during the past three seasons by exports from the USA. Large supplies of cotton in the USA, declining mill use and the effects of the marketing competitiveness provisions of the government program, known as the marketing loan and Step 2, led to new record U.S. exports in each of the past three seasons starting with 2001/02. U.S. exports reached 3 million tons in 2003/04, or 41% of world exports, compared with 1.5 million tons, or 25% of world exports in 2000/01. CFA zone countries exported a record 1.1 million tons during 2003/04. Because of a projected decline in import demand during 2004/05, exports by most of the major exporters are expected to decline, except for Brazil, where an expected sharp increase in production could cause exports to double.

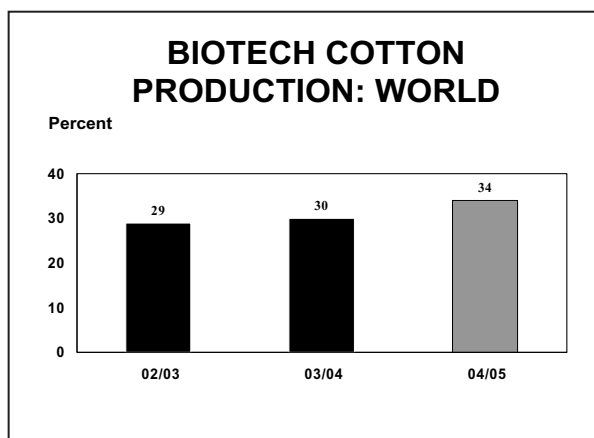

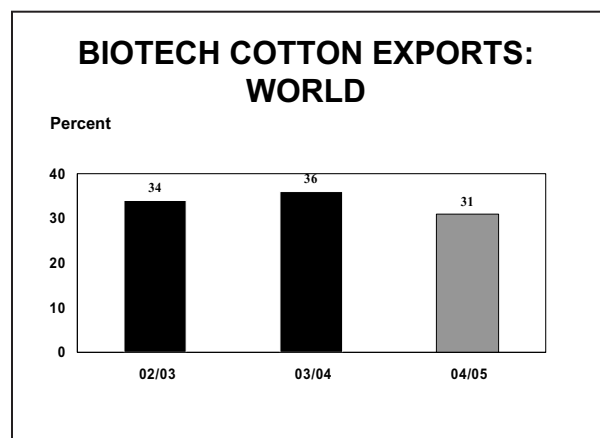

Biotech Cotton Trade

Biotech cotton is entering the world textile trade pipeline in increasing volumes as a result of growing world production and exports from the USA and Australia and textile exports from China (Mainland). The largest plantings of biotech cotton in 2004/05 are projected in the USA (78%), South Africa (95%), China (Mainland) (65%), Australia (60%) and Mexico (40%). Biotech cotton accounted for 21% of world area in 2002/03; 22% in 2003/04; and an estimated 24% in 2004/05. Biotech cotton accounted for an estimated 29% of world production in 2002/03; 30% in 2003/04; and 34% in 2004/05.

Based on the production shares of biotech cotton in exporting countries, it is estimated that biotech cotton accounted for 34% of world exports in 2002/03; 36% in 2003/04 and in 2004/05. The share of biotech cotton is projected to decline in world exports because of an expected decline in export volumes from the USA and Australia. A larger share of world production will be consumed domestically in China (Mainland). In 2003/04 an estimated 64% of all exports of biotech cotton went to Asia and Oceania (not counting the Middle East) compared with 58% in 2002/03.

Based on domestically produced and imported biotech cotton, especially in China (Mainland), it is estimated that 60% of mill use in Asia and Oceania were accounted for by biotech cotton in 2003/04 compared with 31% in 2002/03. Taking into account that Asia and Oceania account for more than 65% of world exports of cotton textiles, it is evident, that the share of GE cotton in textiles traded in major markets in Europe and America is rising. Despite an increasing share of biotech cotton traded in the world, there are no price differentials for biotech and non-biotech cotton fiber, or textiles containing biotech cotton. There is no evidence of rejection of biotech cotton by any segment of the market or region. In practice, markets do not identify biotech cotton content, but rather evaluate cotton properties based on quality characteristics.

Developments in Internet Based-Cotton Trade

Several Internet-based cotton trading platforms were attempted in 2000. However, only The Seam proved successful in creating an on-line platform attracting a large volume of cotton trade. The Seam was launched in December 2000 as a neutral electronic trading platform dedicated to the buying and selling of cotton. The Seam investors include several of the world's largest cotton merchants, cooperatives and large textile mills.

The Seam is based in Memphis, Tennessee and its Internet platform is based on the TELCOT electronic terminal-based platform, which was operated by Plains Cotton Cooperative since 1975. More than 5.5 million tons had been traded through the TELCOT system prior to the launch of The Seam.

Since the launch in December 2000 through mid-October 2004, The Seam has traded about 1.5 million tons of cotton in the US via its grower-to-business (G2B) and business-to-business (B2B) exchanges. Within these guaranteed exchanges, users can view summary information for each lot, detailed bale information and a traditional recap used to trade cotton in the US. Filters allow buyers to more efficiently find and price cotton on the system. Transactions are anonymous and settled online and in real time.

In addition, The Seam launched an international marketplace in the spring of 2003 that allows buyers and sellers to negotiate on standardized contract terms and recognized quality types. Initial offers are standardized on FOB or CIF port basis. About 100,000 tons were traded on the international platform in 2003 and 2004. Buyers can enter counter bids against specific offers or simply put bids into the market and wait for sellers to counter offer. The Seam has partnered with an internationally recognized inspection service and arbitration authorities to ensure that quality parameters are adhered to. Initial target markets include Australia, West Africa, CIS and the U.S. The Seam's International Marketplace allows users to trade only with counterparts the users approve in advance. After approving potential counterparts, users are able to trade freely and anonymously. In addition, The Seam also allows users to incorporate custom trading limits for each counterpart that is approved. Counterpart screening is important because The Seam does not guarantee trade performance on the International Marketplace.

In May 2002, The Seam launched an over-the-counter product to help cotton traders offset price risks that are ever present in the international cotton trade. The Seam's off-exchange cotton swap product provides a flexible way for buyers and sellers of physical cotton to hedge forward fluctuations in world prices and certain growths of cotton. Initially this service is similar to their International Marketplace as they allow users to pre-approve trading partners and then trade anonymously. After this process is completed, The Seam allows qualified participants to post bids and offers on the trading system. The Seam offers six different index products in the swap market – Cotlook's A Index as well as the Uzbek, Uzbek / A Index average and West African components. The Seam also offers a swap settled against the United States Department of Agriculture's Competitiveness Payment program commonly known as Step 2. The Seam does not guarantee swap transactions, so each participant agrees to assume the trading risk.

New Futures Markets

A new futures contract called Cotton # 1 Contract was launched in June 2004 in China (Mainland) at the Zhengzhou Commodity Exchange to help domestic enterprises to hedge price risk. The contract size is 5 tons (about one-fifth of the size of the NY contract) for deliverable grade 328 at exchange-appointed warehouses, saw ginned cotton, with 11 trading months; with February is the only month excluded. The margin maintenance is 7% of contract value (about the same as in New York) and the daily price change limit is set at 4% of the previous day's settlement price (also about the same as in New York). The trading fee is set at 8 Yuan (RMB) per contract. The contract seems popular and was able to attract substantial volumes during the first months. Volumes rose from 12,000 contracts during June 2004 to 24,000 contracts in July. Even larger volumes were traded in August and September when daily volumes were exceeding totals for July; however, aggregated data were not available at the time of writing. The contract apparently attracted a large number of speculators, judging on rising trading volumes. In mid-August, the China Securities Regulatory Commission issued a circular warning cotton traders against speculative behavior and promising to tighten supervision. Shanghai and Dalian also have plans to introduce cotton futures contracts.

A problem of an opposite nature is causing concerns in India, where cotton futures contracts can not attract enough interest and volumes. Cotton futures in India are currently offered on the National Commodity & Derivatives Exchange (NCDEX), the National Multi-Commodity Exchange (NMCE) and the Multi Commodity Exchange (MCX). However, volumes remain meager. Industry organizations are working to attract

traders, mills and brokers to futures trading. However, for volumes to rise a large number of speculators have to be attracted to the contract.

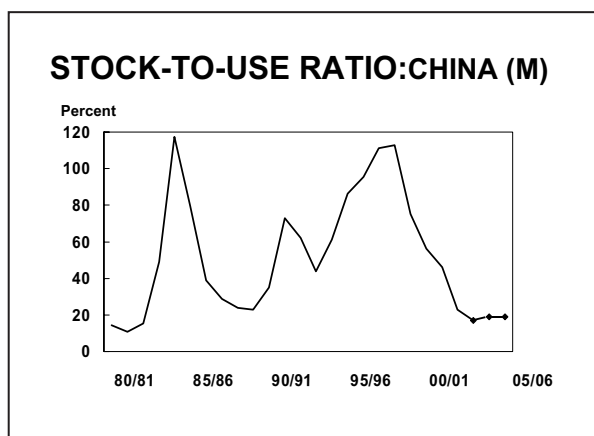

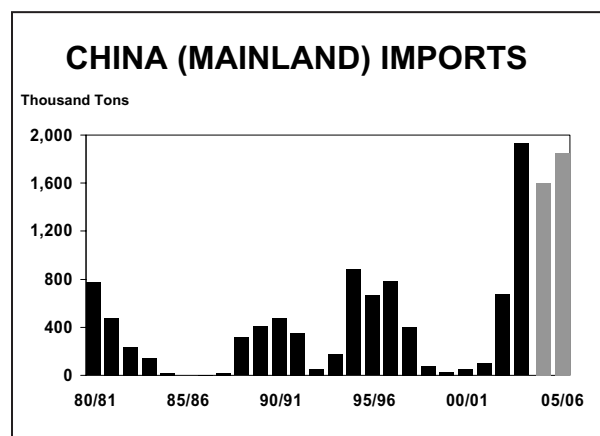

The Bolsa de Mercadorias & Futuros (BM&F) in Sao Paulo, Brazil launched a new cotton futures contract in 1996. During the first year of existence, the contract was regularly traded on a daily basis, however, trading volume remained relatively small and averaged just 58 contracts a day, an equivalent of about 1,200 bales of cotton. The BM&F contract size is just 10,000 pounds, or one-fifth of the New York cotton futures contract. The BM&F cotton futures contract failed to attract significant interest and has not become a popular instrument for hedging and speculation in Sao Paulo. It has not been practically traded since 2000.

Record Imports by China (Mainland)

Imports by China (Mainland) during 2003/04 rose by 1.2 million tons and reached a record of 1.9 million tons, accounting for 26% of world imports. Cotton mill use in China (Mainland) increased by 600,000 tons in 2003/04 and reached an estimated 7.1 million tons, exceeding production by 2.2 million tons. As a result, at the end of 2003/04, stocks in China (Mainland) declined to 1.2 million tons with the stocks-to-use ratio falling to 17%, the lowest in two decades. At the end of the 1990's stocks in China (Mainland) were exceeding annual mill use. Textile mills in China (Mainland) normally maintain about 6 weeks of cotton in stock, which translates into 820,000 tons in 2003/04. Taking into account cotton held by producers, in transit and government strategic reserves, stocks in China (Mainland) as of August 1, 2004 were tight but sufficient to last through the period before the arrival of a new, large, lower-priced crop at the start of September. That explains reduced import demand from China (Mainland) during the summer of 2004. With the reduction of stocks in China (Mainland) to minimum levels, the government began to provide full support to imports by issuing sufficient import quotas as a measure to balance supply and use, reduce domestic prices and make the textile industry more competitive.

The USA was the largest source of imported cotton for China (Mainland) accounting for 1.1 million tons, or 57%, of all imports by China (Mainland) in 2003/04; CFA zone countries accounted for 362,000 tons or 19%; Central Asia accounted for 190,000 tons or 10%; and Australia for 80,000 or 4% of imports by China (Mainland) in 2002/03.

It is projected that cotton production in China (Mainland) will climb to 6.3 million tons in 2004/05. However, consumption is expected to reach 7.6 million tons, with imports projected at 1.6 million tons. Some of the new crop supplies will be used to replenish government strategic reserves. The stocks to use ratio will increase by two points to 17% but will still remain relatively low.

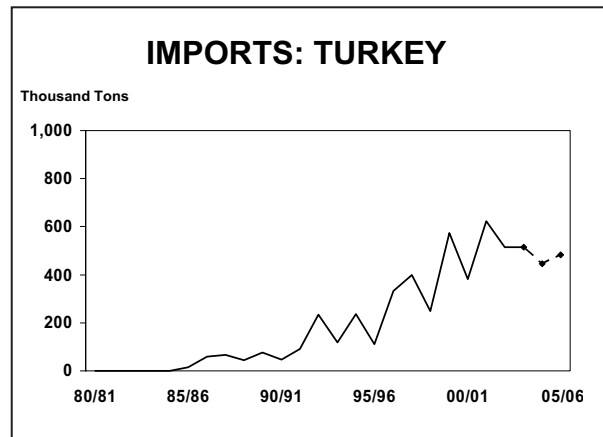

Mill Use in Turkey Expands, Imports Remain High

For the second season in a row Turkey was the second largest importer of cotton accounting for 516,000 tons or 7% of world imports in 2003/04. The textile industry in Turkey continues to expand, driven by rising exports of textiles and apparel to Europe, USA and other markets. During the 1990s, annual imports of textile machinery by Turkey averaged U.S. \$1.3 billion. Total spinning capacity in Turkey is estimated at 750,000 tons of ring span yarn and at 550,000 tons of open end yarn. The textile and clothing industry revenues from exports are estimated at U.S. \$15 billion, representing 10% of the country's GDP.

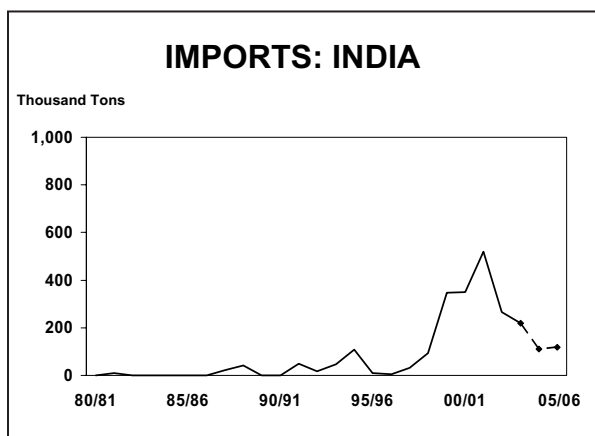

Between 2000/01 and 2003/04, mill use in Turkey rose by 175,000 tons and reached 1.33 million tons. Because cotton production in Turkey remains behind increasing use, imports remain a significant source of supply. Turkey was the largest importer of cotton in 2001/02 with imports estimated at 624,000 tons. In 2002/03 and 2003/04 imports were at 516,000 tons. The USA provides GSM-102 credit guaranties to Turkey and is the largest supplier of cotton to Turkey. In 2003/04, Turkey imported 317,000 tons from the USA accounting for 61% of total imports, the same as in 2002/03. About \$120 million of U.S. cotton

sales to Turkey or 31% of all imports were registered under the GSM 102 program in 2002/03 and \$170 million or 36% of all imports in 2003/04. Greece was the second largest supplier of cotton to Turkey, accounting for 82,000 tons or 16% of imports in 2003/04. Syria and Central Asia are other major suppliers of cotton to Turkey, accounting for approximately 6% each. An increase in cotton production in Turkey in 2004/05, estimated at 50,000 tons, could result in a similar reduction in imports.

Indian Imports Decline

India became one of the leading importers of cotton starting in 1999/00 because of reduced production due to reduced planted area and drought. During the same period, Indian mill consumption was stable at around 2.9 million tons, supported by strong exports of cotton yarn and textile exports

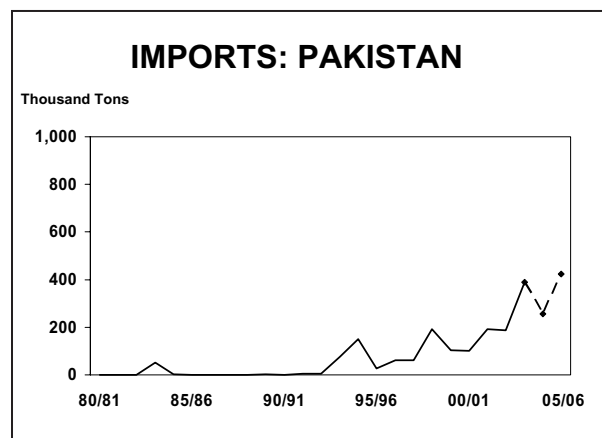

to Asian markets, USA, Canada and Mexico. In 2001/02, India imported 520,000 tons of cotton accounting for 8% of world imports. Indian area and yields rose during 2003/04, resulting in a crop of 3 million tons. Plantings of Bt cotton were at 40,000 hectares in 2002/03 and were estimated at more than 400,000 hectares in 2003/04. As a result of increased domestic supply, imports by India declined to 220,000 tons. During 2003/04, the U.S. share of imports by India declined to 20%, from 42% in 2002/03 and 50% in 2001/02. Price and quality considerations and, possibly, technicalities related to the application of trading

rules and procedures for resolution of contract fulfillment and quality disputes, could have led to a decline in the U.S. share. At the same time, CFA zone countries increased exports to India from 7% in 2001/02 to 20% in 2002/03 and to 30% of the total in 2003/04. Imports by India from Central Asia remain stable, at about 5% of the total.

Because of reduced domestic production, low prices and increased demand for fine count yarns, India became one of the largest importers of extra-fine cotton, with imports of this category reaching 40,000 tons in 2003/04. Most extra-fine cotton was imported from Egypt and the USA. It is expected that India will remain the major importer of extra-fine cotton in 2004/05. Because of improving export and domestic market demand for Indian yarn and fabric, cotton mill use in India is projected to increase during 2004/05 to 3 million tons and will be almost equal to production, leading to a decline in imports to an estimated 150,000 tons.

Demand for Quality Cotton Remains High in Pakistan

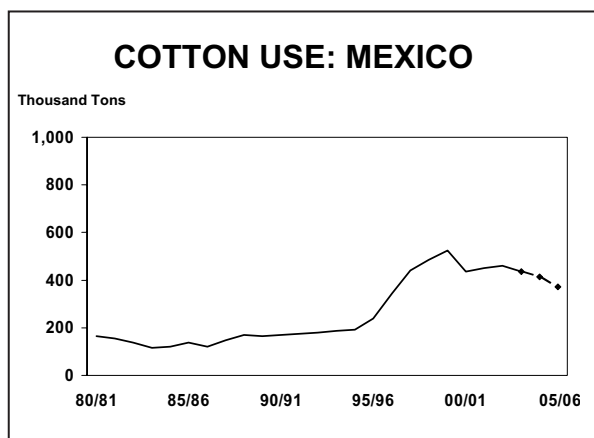

Preparing for elimination of textile quotas in 2005, the textile industry in Pakistan is aggressively pursuing modernization, quality improvements and production diversification to secure market share. The spinning and weaving industries continue to invest heavily in new equipment because of improved profitability over the last several years. Cotton consumption in Pakistan continues to expand rapidly in response to export-driven demand. During 2003/04, cotton mill use in Pakistan rose by 3% and reached 2.1 million tons, exceeding production by 400,000 tons. Imports by Pakistan doubled during 2003/04 to 400,000 tons. The USA was the largest supplier of cotton to Pakistan in

2003/04, accounting for one-third of all imports. CFA zone, Iran, Australia and Syria are other major suppliers to Pakistan. Higher quality cotton accounts for a significant share of imports by Pakistan. For the second season in a row, Pakistan was the largest buyer of U.S. Pima, importing 22,000 tons. In addition, up to 10,000 tons of Egyptian cotton was imported by Pakistan in 2003/04. Projected rise in domestic supply of cotton in 2004/05 in Pakistan could lead to a reduction of imports to 260,000 tons. Extra-fine cotton is expected to account for a major share of imports by Pakistan in 2003/04.

Mexican Cotton Demand Reduced by Competition

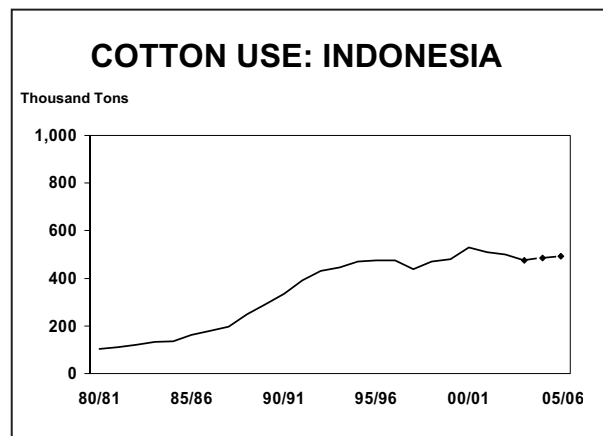

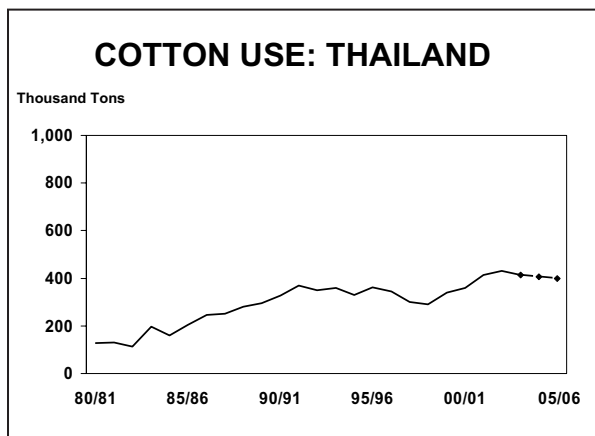

Textile exports from Mexico to its main destination in the USA are affected by increased competition from, mostly, Chinese textiles. After a short recovery during 2001/02 and 2002/03, mill use in Mexico declined by 5% during 2003/04 and a further decline of 5% to 410,000 tons is projected for 2004/05. Because of higher

cotton prices during planting, Mexican cotton area and production are expected to double during 2004/05. Mexican cotton imports are projected to decline from 350,000 tons in 2003/04 to less than 300,000 tons in 2004/05. Mexican imports as a share of world imports are declining from 8% in 2002/03 to 6% in 2004/05. The USA accounts for 98% of Mexican cotton imports.

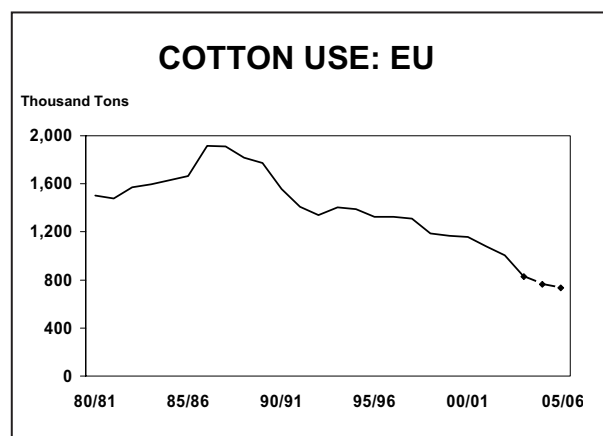

East Asian Cotton Demand Declines

During the past two seasons most East Asian countries experienced a decline in textile capacity due to the world economic recession and increased competition from countries with lower labor and energy costs, such as China (Mainland), Turkey, Pakistan and India. It is projected that East Asian mill use and imports will decline by 200,000 tons between 2001/02 and 2004/05 to 1.5 million tons. The Share of East Asian countries in world imports declined from 37% in 1990/91 to 20% in 2003/04. However, in 2004/05 cotton demand by Indonesia and Thailand is expected to remain more stable than in other countries in the region. Cotton demand by Indonesia in 2004/05 is projected at 480,000 tons, compared with 500,000 tons in 2002/03. Australia and the USA are the largest suppliers and each account for about 40% of Indonesian cotton imports. West Africa is another important supplier of cotton to Indonesia. Similarly, cotton demand by the textile industry in Thailand is estimated at 410,000 tons in 2004/05 compared with 430,000 tons in 2002/03. The USA accounted for 31% of imports by Thailand in 2003/04, CFA zone for 22% and Australia for 16%.

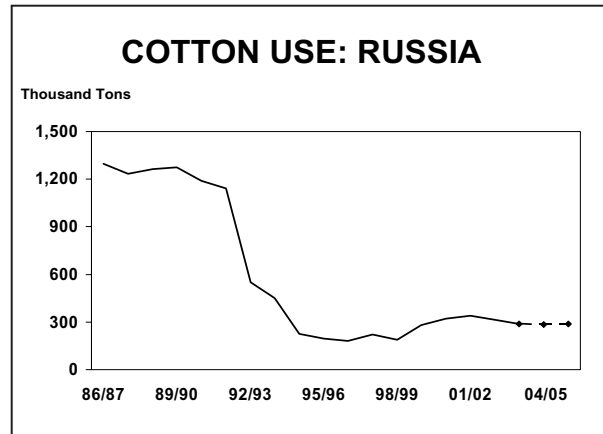

EU Cotton Demand Continues to Decline

The decline in mill use and cotton imports by the European Union continues because of expansion of textile imports from China (Mainland) and other textile economies. It is projected that imports by the EU will decline to 670,000 tons in 2004/05 from 700,000 tons in 2003/04. More than 1 million tons were imported by the 25 countries of the EU during 2000/01.

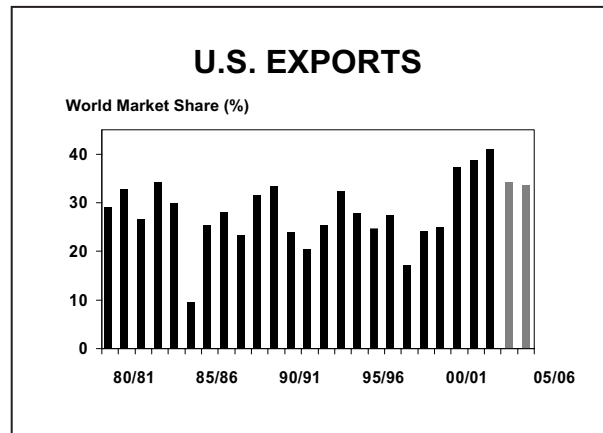

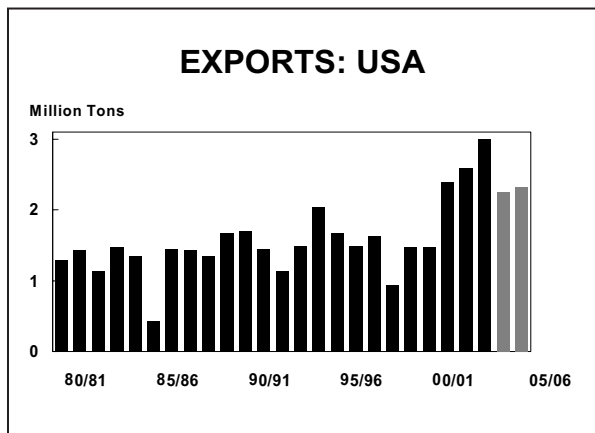

Russian Mill Use Stable

During the past two seasons, imports of cotton by Russia stabilized close to 300,000 tons. The Russian textile industry experienced very rapid growth between 1998 and 2002 in the aftermath of the financial crisis of 1998 and steep devaluation of the Russian ruble. Cotton mill use rose from 190,000 tons in 1998/99 to 340,000 tons in 2001/02, and low cotton prices helped to stimulate cotton demand. With the weakening dollar and rising imports of textiles from China (Mainland), mill use in Russia declined to 290,000 tons in 2003/04. The share of imported textiles in end-use consumption reached more than 60% in 2003. Cotton imports by Russia are projected at 295,000 tons in 2004/05, with Uzbekistan accounting for 50% and other Central Asian countries for 45% of the total. Some of the major textile companies in Russia are implementing large investment strategies in order to secure a share of textile markets, especially in Europe.

Exports from the USA Reach a Record

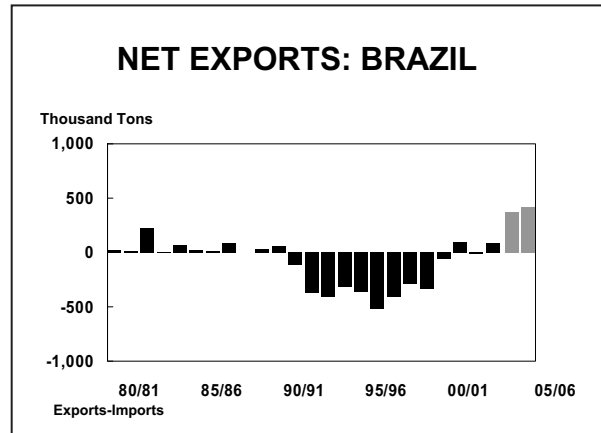

Increased world import demand was met during the past three seasons by exports from the USA. Record supplies of cotton in the USA, declining mill use and increased Step 2 payment rate, led to record U.S. exports during the past three seasons. In 2003/04 U.S. exports reached a new record of 3 million tons, an increase of 400,000 tons from a record set in 2002/03. The U.S. accounted for 41% of world exports in 2003/04 compared with 39% in 2002/03 and with 1.5 million tons, or 25% of world exports, in 2000/01. Starting with 2001/02, a much larger share of the U.S. crop is being exported than used domestically. U.S. mill use continues to decline and fell by 160,000 tons in 2003/04 to 1.43 million tons. Increased import demand from China (Mainland) was the major factor leading U.S. exports to record levels. In 2003/04 1.1 million tons of U.S. cotton were imported by China (Mainland) accounting for 36% of U.S. exports and 15% of world exports. Mexico was the second largest importer of U.S. cotton accounting for 12% of U.S. exports; Turkey was the third largest importer accounting for 10% or 310,000 tons of U.S. exports; Indonesia is the fourth

importer accounting for 6%; and all other importers in Asia accounted for 30% of U.S. exports. Western Hemisphere countries not counting Mexico account for 6% of U.S. exports. In 2004/05, cotton supplies in the USA are expected to increase by 250,000 tons. However, U.S. exports are expected to decline to 2.2 million tons because of a projected decline in imports by China (Mainland) and will account for 34% of world exports.

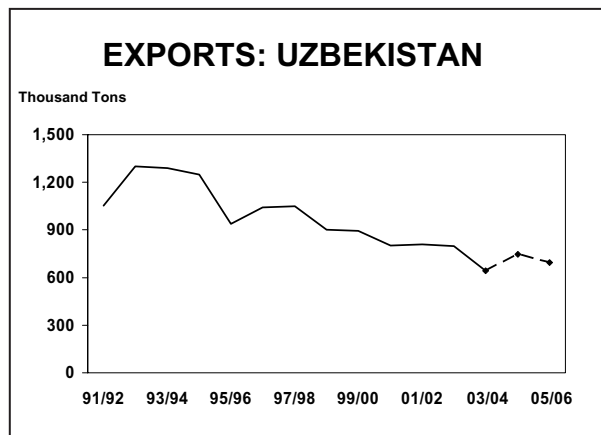

Brazil Becomes a Net Exporter

Between 1991/92 and 2002/03, Brazil was a net importer of cotton. During the past several seasons cotton production began to rise rapidly because of new high yielding commercial production in Central Brazil, including, Mato Grosso. In 2003/04, cotton production in Brazil rose by 425,000 tons and reached 1.3 million tons, exceeding consumption by almost half a million tons. Exports by Brazil are estimated at 210,000 tons in 2003/04 but are projected to more than double in 2004/05 to 450,000 tons. A record crop of 1.3 million tons is projected for Brazil in 2004/05. Brazil will likely remain a significant net exporter of cotton. Argentina, Portugal, India, Indonesia and other European and Asian countries are major buyers of Brazilian cotton.

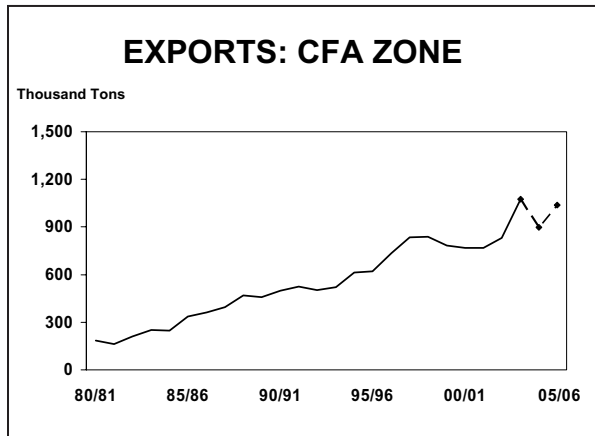

Uzbekistan Exports Could Rise

Exports from Uzbekistan were mostly declining from 1.3 million tons in 1992/93 to 650,000 tons in 2003/04. The reason for the steady decline in exports was a decline in production and increased mill use. In 2004/05, production in Uzbekistan is projected to rebound by 180,000 tons to 1.1 million tons. Exports are projected to increase to 770,000 tons, accounting for 12% of world exports. Cotton area in Uzbekistan is projected to remain stable during the next several seasons. At the same time, Uzbekistan is expected to continue expansion of spinning capacity, increasing utilization of cotton domestically and reducing the availability of supplies for exports. Russia remains the major importer of cotton from Uzbekistan, accounting for 25% of Uzbek exports. Other countries in Europe account for 40% of exports from Uzbekistan, while Asian countries account for about 25%.

Record Exports from CFA Zone

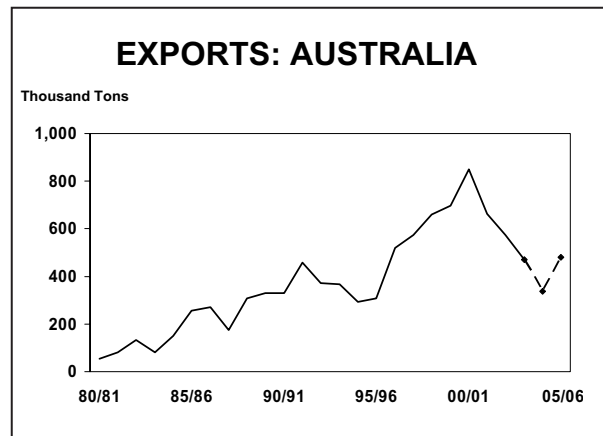

Exports from the CFA zone are estimated at a record of 1.1 million tons in 2003/04, an increase of more than 200,000 tons from 2002/03. Cotton production in the CFA zone reached a record of 1.03 million tons in 2001/02, an increase of 300,000 tons. Most of the increase took place in Benin, Burkina Faso, Cote d'Ivoire, Mali and Togo. Political difficulties in Cote d'Ivoire impeded

shipments from the region, leading to a build up of large stocks estimated at over 500,000 tons in 2002/03. The total supply in 2003/04, including stocks, rose by 100,000 tons, to 1.5 million tons leading to increased exports. Exports from the CFA zone accounted for 15% of world exports in 2003/04, and the share is projected to decline to 14% in 2004/05 because of reduced domestic supplies and declining import demand. Europe and Asia are major destinations for West African cotton.

Supplies in Australia are Rising

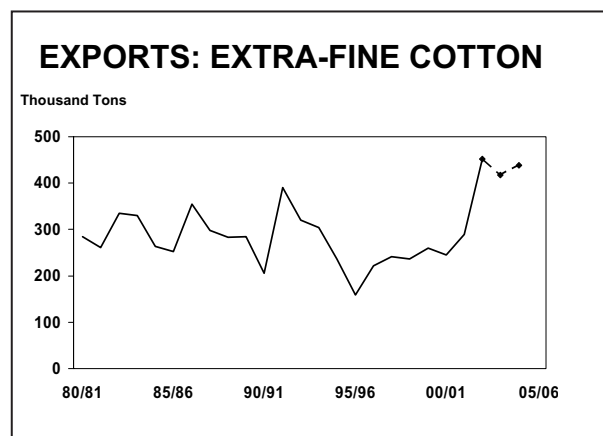

Australian production suffered from severe drought during the past several seasons leading to a sharp decline in exports. In 2003/04, Australian exports fell to 470,000 tons compared with 850,000 tons in 2000/01. Australian cotton production in 2004/05 is projected to increase to 500,000 tons from 330,000 tons in 2003/04. Despite this increase, exports from Australia will decline to 340,000 tons during 2004/05 as a result of reduced production in 2004. Australia will account for only 5% of world exports in 2004/05, compared with 14% during 2000/01. Major destinations for Australian cotton are in East Asia, and Indonesia is the largest market. The smaller supply from Australia is offset by increased shipments from Brazil and the CFA zone.

Record World Extra-Fine Exports Projected

World exports of extra-fine cotton declined from a record of 450,000 tons in 2002/03 to an estimated 420,000 tons in 2003/04 because of reduced supplies. World production of extra-fine cotton in 2004/05 is rising by 160,000 tons to 770,000 tons, the highest since 1994/95. Egyptian extra-fine production is expected to increase by 50% in 2004/05 to 295,000 tons. U.S. Pima production is projected to increase by 63% to a record of 150,000 tons. Production in other countries is projected to increase by 2%.

World exports of extra-fine cotton are projected to rise to 465,000 tons in 2004/05. Projections of increasing supplies of extra-fine cotton in 2004/05 led to a decline in prices at the start of 2004/05 by 25% compared with the average price in 2003/04. Relatively low prices for extra-fine cotton will stimulate a surge in demand for

this cotton as spinners replace some upland with extra-fine cotton to improve quality for a relatively low premium and to build stocks taking advantage of historically low prices.

It is projected that exports of Egyptian cotton will rise from 120,000 tons in 2003/04 to 150,000 tons in 2004/05. Exports of U.S. Pima are projected to increase from 120,000 tons in 2003/04 to 140,000 tons in 2004/05. India, Pakistan, China (Mainland), Indonesia, Italy and Japan will remain the major markets for extra-fine cotton in 2004/05.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1984/85, Argentina reports exports to China (Taiwan) of 20,730 tons; China (Taiwan) reports imports from Argentina of 19,740 tons. Imports may differ from exports for a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

1/ Data on exports by Paraguay and Zimbabwe during 1984/85 are not available.

*The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1988/89, Argentina reports exports to China (Taiwan) of 13,640 tons; China (Taiwan) reports imports from Argentina of 8,880 tons. Imports may differ from exports in a given season because of time spent in transit; changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 1995/96, Australia reports exports to Japan of 64,190 tons; Japan reports imports from Australia of 66,060 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transhipment through third countries and errors in record keeping.

* The top number in each row equals the quantity of raw cotton exporters report having shipped to each importer. The bottom number in each row equals the quantity importers report having received from each exporter. For example, in 2001/02, Australia reports exports to Japan of 114,550 tons; Japan reports imports from Australia of 113,160 tons. Imports may differ from exports in a given season because of time spent in transit, changes in the weight of cotton during shipment, transshipment through third countries and errors in record keeping.
