*The price projection for 2021/22 is based on the ending stocks-to-mill use ratio in the world-less-China in 2019/20 (estimate), in 2020/21 (estimate) and in 2021/22 (projection), on the ratio of Chinese net imports to world imports in 2020/21 (estimate) and 2021/22 (projection), and the average price in 2020/21. The projection reflects a 95% confidence interval.

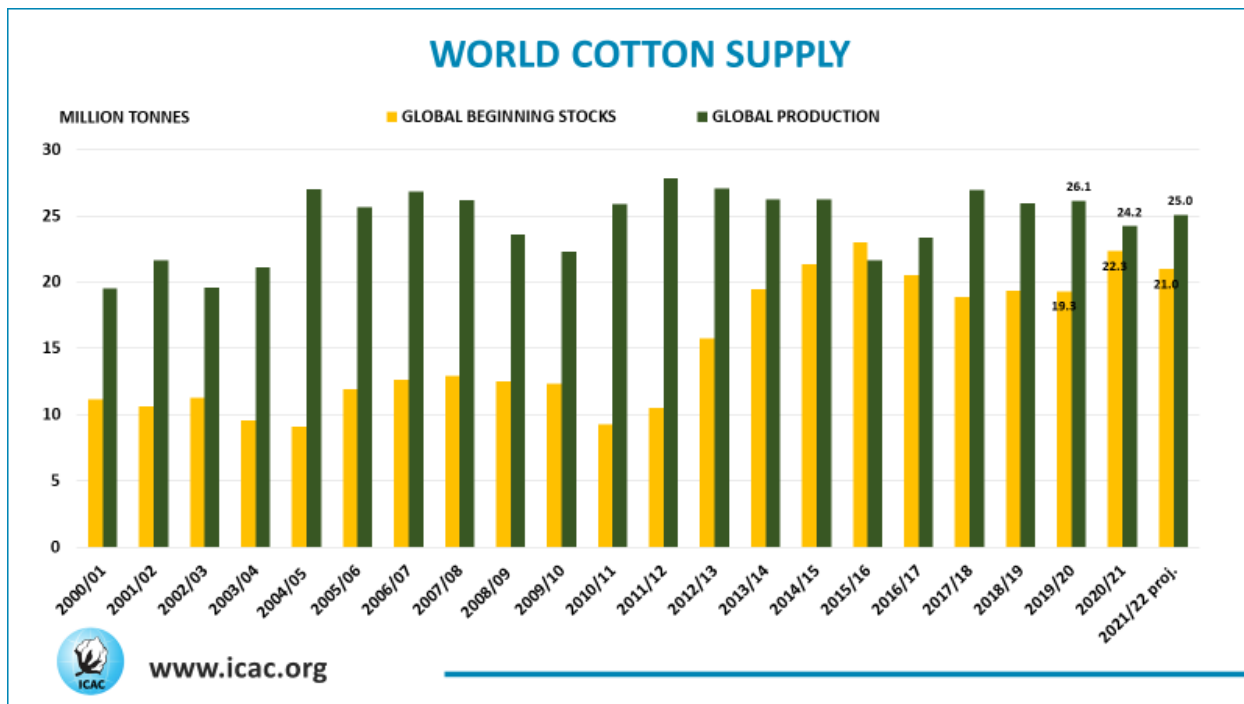

Cotton This Month

2nd August 2021

World Cotton Supply Scenario for the 2021/22 Season

Global cotton production is expected to show a recovery in the 2021/22 season. After plummeting by 7% in 2020/21 compared to 2019/20, it is expected to recover in 2021/22 by increasing 3% to reach 25 million tonnes.

This production will be led by India, China, Brazil and USA. In 2021/22, US cotton production is projected to be 22% higher at 3.8 million tonnes. The increase in production is mainly explained by a projected surge of 27% on the harvested area to 4.2 million hectares. This estimate assumes an historically low 10% abandonment rate. Nevertheless, the expected harvested area is still lower than it was in pre-pandemic seasons. The US average yield is expected to be at 912 kg/ha, lower than the ten-year average of 942 kg/ha, which makes this projection still achievable.

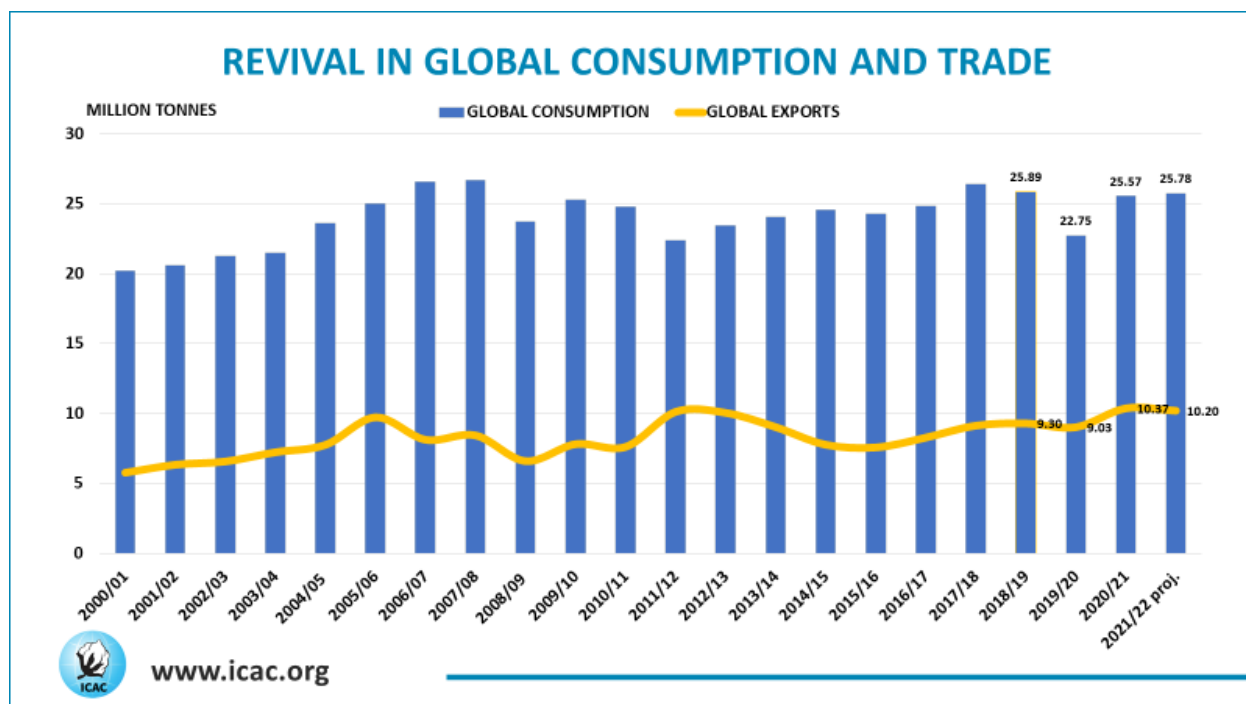

India's cotton production is expected to remain high at about 5.9 million tonnes in 2021/22. A clearer harvested area and production picture can be drawn by the end of sowing, which is currently underway in India and is expected to be completed by mid-August.

Brazil is yet to announce its production area and forecasts for the 2021/22 season; planting won't begin until November. Harvesting of Brazilian cotton for the 2020/21 season is ongoing and will continue through September. The current updates indicate the harvested area to be 1.3 million hectares and production at about 2.3 million tonnes, a decrease of 18% and 22%, respectively, compared to 2019/20 season. By July, Brazilian data indicates that 82% of the 2020/21 crop will be sold in forward cotton contracting.

Pakistan showed a drastic decline in its harvested area and production levels during the 2020/21 season. The area dropped by 21% to 2 million hectares and production decreased by 33% to 890,000 tonnes. This

reduction was mainly due to uncertain climate conditions, pest attacks and better prices and government support for competing crops which made them shift to other crops like sugarcane and maize. Pakistan's cotton production is expected to remain at the same levels for the 2021/22 season. To support Pakistan's domestic demand, it is expected that the country will rely on increased imports.

Global cotton consumption and trade have seen a welcome recovery in the 2020/21 season. Global consumption increased by 12.4% to reach 25.5 million tonnes and is projected to remain on the same trajectory for 2021/22. Global exports have increased by 14.9% to reach 10.4 million tonnes in 2020/21. The overall economic recovery, a rejuvenated textile and apparel sector and a demand-led increase in cotton exports have resulted in a lower beginning stocks for 2021/22 season at 20.9 million tonnes.

In 2020/21, US exports increased by 6% over the prior season to reach around 3.5 million tonnes. Brazil has also been exporting greater volumes of cotton and expects to be at 2.3 million tonnes in 2020/21 — 20% higher than the 2019/20 season — with China being its top destination. To deepen their ties, China National Cotton Exchange (CNCE) and Brazilian Association of Cotton Producers (Abrapa) signed a formal MOU in June 2021 involving joint market development.

Mounting concerns about the spread of Covid-19's delta variant still pose a threat to the recovering cotton sector. While cotton consumption is showing a revival, the growing number of Covid cases may cause a slowdown in manufacturing industries' operations and retail sales. Recent news from Bangladesh and Vietnam indicates that Covid infections are on the rise, so lockdown-induced factory closures and shipping problems, leaving manufacturers scrambling to fill their orders.

Price projections

The Secretariat's current price forecast of the season-average A index for 2021/22 ranges from 73 cents to 125 cents, with a midpoint at 95.43 cents per pound.
