West African Cotton Production Set to Make a Full Come Back From the 2020/21 Season

World cotton production for the 2021/22 season is poised for a full come back from a disappointing 2020/21 season. Current estimates put world production at 25.71 million tonnes. This is a 6.01% increase over the 2020/21 season of 24.26 million tonnes. This increase is largely driven by the United States who is currently reporting 3.91 million tonnes, an increase of 739,000 tonnes over the 2020/21 cotton season. However, of the five largest cotton producers in the 2020/21 season, the United States, Brazil and Pakistan are expected to increase in 2021/22, with China and India reporting declines. World production has still not fully recovered to pre-pandemic levels but has made up significant lost ground.

Production Change in '000 Metric Tonnes from 2020/21 to 2021/22

In Africa, specifically West Africa (Francophone Africa), we are seeing a slightly different story. All West African countries are reporting production increases with Benin and Mali leading with 382,000 and 340,000 tonnes, respectively. In West Africa, production is up nearly 47.8% over the production numbers of the 2020/21 season. Benin, Burkina Faso, Cameroon, Chad, Côte d'Ivoire, Mali, Senegal and Togo, are all currently on pace to exceed the prior year's production totals. While it is difficult to know if these production numbers will stand, the fact that all of the West African countries are reporting positive increases is an encouraging sign for the future of cotton in Africa.

The largest increase in production is being realized by Mali. As a member of the C4, Mali's cotton production declines' in the 2020/21 were a concern for African cotton. In 2019/20 Mali reported a total cotton production of 284 thousand tonnes. In the 2020/21 season Mali reported 63 thousand tonnes, a sizable decline of 77.82% from the 2019/20 season. These losses were due, in large part to the COVID-19 pandemic that was raging during the time

farmers were making planting decisions. Cotton prices suffered a decline in the first quarter of 2020 and as a result the producer price in Mali was cut to 200 CFA francs (\$0.35) per kg. However, the Mali government provided a subsidy of 50 CFA per each kg of seed cotton produced which brought the producer price up to 250 CFA which was still down from a price of 275 CFA francs in the previous season. This coupled with steep increases in the cost of production inputs caused Malian cotton farmers to plant less hectares in cotton during the 2020/21 season. Mali is currently estimated to plant 824.16 thousand hectares in 2021/22, an all time high. This number is likely to be revised but as of July 2021 the producer price in Mali was 280 CFA (\$0.5047) per kg of seed cotton, which could indicate a full rebound from the 2020/21 season.

Cotton Production for West Africa

Price projections¹

The Secretariat’s current price forecast of the season-average A index for 2021/22 ranges from 87 cents to 126 cents, with a midpoint at 104.26 cents per pound.

Cotton This Month is published at the beginning of the month with the Cotton Update published mid-month. The cotton Update is a mid-month report with updated information on supply/demand estimates and prices. The next Cotton Update will be released on 15th November 2021. The next Cotton This Month be released on 1st December 2021.

¹The price projection for 2021/22 is based on the ending stocks-to-mill use ratio in the world-less-China in 2019/20 (estimate), in 2020/21 (estimate) and in 2021/22 (projection), on the ratio of Chinese net imports to world imports in 2020/21 (estimate) and 2021/22 (projection), and the average price in 2020/21. The projection reflects a 95% confidence interval.
